Profile

I'm a skilled web developer with over a year of experience working in agile development teams on time-critical projects. I impress clients and stakeholders with my robust planning and communication skills, and take a rational, business-minded approach to development. I can make front-end architectural decisions confidently, and am always on the lookout for ways to optimise efficiency, performance and simplicity. I love to build things that people enjoy using, and I have a good eye for ui/ux design. I'm looking for rewarding work on a modern stack, in a team that cares about code quality as much as I do.

Skills

Technologies

- React, Vue, D3
- Javascript, including ES6+ features
- CSS, preprocessors (SASS, Stylus)
- Node frameworks - Express, Koa, Hapi
- Build tools - Webpack, Rollup, Babel
- NoSQL - MongoDB, Firebase

Workplace

- Problem solver and critical thinker
- Natural communicator
- Strong interpersonal and teamwork skills
- Reliable and conscientious, able to deliver under pressure
- A knack for spotting when things could be done better

Experience

Calibrate Consulting, Web Developer (consultant)   November 2019 - present

`React / D3 / Node.js / Rollup / Qlik Sense`

- Led UI development of reporting dashboards at a major global bank with limited handover from the previous developer.
- Recognised as a capable Javascript developer by the client, advised their architecture team on strategic decisions.
- Single-handedly reduced total load times by 80% through API call optimisations and React best-practice tweaks.
- Proposed and subsequently led development of a React component library to facilitate reuse of my team's components across the organisation. Used Storybook to showcase UI components.
- Took a proactive role in automating tasks and reducing my team's technical debt: implemented snapshot testing and linting, improved version control guidelines, developed command line productivity tools.
- Helped train junior developers in my company, regularly holding workshops and company-wide presentations.

Freelance, Web Developer   June - November 2019

`Vue / Node / Firebase / AWS / Figma`

- Worked on a progressive web app for landscape architects to reduce their projects' carbon footprint.
- Built and integrated a subscription sign up flow for an email newsletter product. Designed checkout interface, used Stripe Elements and Google Cloud functions to handle payment and update CRM.
- Received a 5 star feedback rating from every client worked with on the Upwork freelance platform.

Education

Woodhouse Sixth Form College (September 2015 - June 2017):
Achieved ABB at A Level in Geography, Mathematics, Government & Politics respectively

Woodside High School (September 2010 – July 2015): 10 GCSEs A* - C including 5 A*s

Interests

Web development is a recent passion, but I've always been interested in technology: I built my own computer at 15. I love travelling, and since finishing my A Levels I have been travelling twice in South East Asia. I created a travel blog to help me learn to code, building the site from scratch with Express for Node and a custom built CMS.
